TRINETRA Smart Hospital Security Console

Physician Authentication & Individual Doctor Login Credentials Provisioning Record

Issue Date: October 17, 2026 - 18:58:30 UTC	**Issuing Authority:** Hospital SOC / CISO Office
Target System: TRINETRA IoMT IDS/IPS Gateway v2.0	**Authentication Scope:** Individual Attending Physician Mobile Accounts
Security Mandate: Zero-Trust Individual RBAC (No Shared Logins)	**Compliance:** HIPAA Security Rule § 164.312(a)(2)(i)

CONFIDENTIALITY NOTICE & ZERO-TRUST AUTHENTICATION POLICY:
In strict adherence to medical privacy and hospital network defense regulations, **TRINETRA strictly enforces individual physician credentials**. Shared or group credentials are computationally blocked at the API Gateway. Each doctor is granted access exclusively to telemetry streams and intrusion alerts originating from their specifically assigned clinical patients. **Temporary passwords listed below expire after first login** and require an immediate mandatory password replacement before any clinical telemetry can be rendered.

1. Attending Physician Account Manifest & Generated Credentials

The following accounts have been provisioned in the TRINETRA production database. All initial passwords were cryptographically generated using system entropy. *Plaintext passwords are NOT retained on the backend; only their salted SHA-256 hashes are persisted.*

Doctor Full Name	Username	Temporary Initial Password	Department / Ward	Assigned Patient(s)	First-Login Policy
Dr. Sarah Connor	dr.connor	`TRN-C5LA@JOHO`	Cardiology & Intensive Care (ICU-A)	Robert Smith (patient_102), babu (PAT-6665)	**MANDATORY RESET** Enforced by Gateway
Dr. Radhi	dr.radhi	`TRN-U4UK!M97U`	Critical Care & Tele-ICU (ICU-A)	raju (PAT-7850), Anirudh (PAT-3851), Patient patient_101 (patient_101)	**MANDATORY RESET** Enforced by Gateway
Dr. Rocky	dr.rocky	`TRN-9A3H@PW69`	Emergency Medicine & Trauma (ICU-A)	bhhd (PAT-6529)	**MANDATORY RESET** Enforced by Gateway
Dr. Arjun	dr.arjun	`TRN-R55S&ZZMG;`	Cardiothoracic Surgery Subnet (ICU-C)	Jeeva (PAT-4008)	**MANDATORY RESET** Enforced by Gateway

2. Secure Onboarding & First-Login Step-by-Step Instructions

• **Step 1: Install TRINETRA Mobile:** Download and install the TRINETRA Smart Hospital Security Console APK onto your hospital-issued or MDM-managed Android mobile phone.

• **Step 2: Connect to Gateway:** Verify that your device is connected to the secure Hospital Clinical Wi-Fi (VLAN-70) or authorized WireGuard VPN.

• **Step 3: Initial Authentication:** Launch the TRINETRA mobile app, select **Doctor Login**, and enter your assigned username and temporary password from the manifest above.

• **Step 4: Mandatory Password Change:** The TRINETRA gateway will immediately detect the must_change_password flag and present the Secure Credential Update dialog. Create a strong password (minimum 8 characters, alphanumeric + symbols).

• **Step 5: Biometric & Device Binding:** Upon successful password change, your physical device ID and push notification token will be registered into the backend device authorization table.

• **Step 6: Account-Specific Alert Verification:** Verify that only your assigned patients appear on your live telemetry monitor and IDS alert feed. Doctor A will never receive Doctor B's patient anomaly alerts.

3. Account-Specific Alert Routing Verification Matrix

Authenticated Role	Authorized Telemetry & Alerts	Quarantine & Mitigation View	Notification Sounds & Channels
Doctor	Assigned patients only (ECG waveform, HR, SpO2, sensor integrity status)	Clinical safety advisory + quarantine recommendation	Audible Critical Channel (bypasses DND for code blue alerts)
Patient	Own profile only (simplified device calibration status, resting advice)	Hidden technical exploit telemetry; friendly safety notices	Standard Care Channel (subtle chime)
Technical SOC	All hospital IoMT devices, attack vectors, MQTT telemetry metrics, IDS classification	Full IPS quarantine actions, firewall rule triggers, packet latency drops	SOC Urgent Channel (continuous alert beep)
Administrator	Hospital-wide metrics, active threats today, device fleet status, audit logs	Account provisioning, doctor assignments, device token revocation	Administrative incident summary channel

Provisioned By: TRINETRA Identity & Access Control Subsystem	**Approved By:** Medical Director & Chief CISO
Digital Signature: SHA256:7B8F91A23D0C...CONFIRMED	**Storage Status:** Salted Hash In Database (Zero Plaintext)
